MORE BLACK ON WHITE FAKES

The Alleged Incident in Fruitland Park

Recent reports detail an incident in which Lemar Beasley allegedly murdered Cheyenne Kastens in a Dollar General parking lot in Fruitland Park, Florida. According to these accounts, Beasley stabbed the 36-year-old victim over 40 times without an apparent motive. While investigations into public records on platforms such as Radaris confirm that Cheyenne Kastens is a real individual, several discrepancies suggest that the official narrative may be unreliable.

Discrepancies in Familial Connections

A review of genealogical data reveals that Cheyenne Kastens is related to an individual named Heather Beasley. This connection is noteworthy because the Putnam County Sheriff's Office stated that the suspect, Lemar Beasley, was a stranger who ambushed Kastens. The statistical improbability of a victim being murdered by a stranger who shares a surname with her own relatives suggests the possibility that the event was staged. There is reason to suspect that Kastens may have faked her death, potentially involving intelligence agencies such as the CIA, as part of a broader effort to incite social or racial conflict.

Inconsistencies in Personal Records

Public data regarding these individuals appears to have been altered or managed. For instance, Cheyenne Kastens' profile on Instantcheckmate has been partially scrubbed, now listing only Shawn Kastens as a relative. Heather Beasley, the 40-year-old relative, is associated with multiple aliases—including Sullivan, Stanfield, Blaine, and Reid—and has maintained addresses in Georgia, Pennsylvania, Louisiana, Florida, and Mississippi. Records on TruthFinder link her to 44 different people, including 12 individuals with the Beasley surname.

Efforts to locate specific records for Lemar Beasley also present challenges. A search for a 54-year-old Lemar Beasley in the Florida and Georgia regions yielded no results on Instantcheckmate. While a listing for Lemar Beasley exists on Radaris in Palatka, Florida, it lists only one relative, Lamont, who has no listed relatives of his own. This lack of corroborating data suggests the records may have been planted or scrubbed. However, a search for the name Lamar Beasley reveals a significant match for an individual also known as Everette Beasley of Thomaston, Georgia, who is related to an Everett Beasley.

The Link Between the Families

The investigation further connects the families through Heather Beasley. Records indicate that Heather Beasley, a relative of the victim Cheyenne Kastens, is also related to Everette Beasley and Everitt Beasley. Additionally, clicks on related names such as Gail Beasley lead to Dorothy Beasley, who is linked to Ben or Benny Beasley.

Furthermore, Heather Beasley's LinkedIn profile is notably empty of professional information, containing only a single link to Southwell, a health system located in South Central Georgia. The scrubbed nature of this profile suggests a deliberate attempt to hide information. These findings imply that the event in Fruitland Park may have been fabricated to distract the public from other issues, such as controversies involving the pharmaceutical industry and vaccine-related concerns.

Broader Context of Media Deception

This pattern of staged narratives extends to international reports, such as recent claims that North Korea has developed a nuclear submarine. Visual evidence presented to the public appears to be computer-generated imagery (CGI) rather than actual photography. The reliance on digital effects suggests that North Korea lacks such a vessel and that the reports are intended to create a climate of fear.

These manufactured threats appear designed to support the interests of the military-industrial complex and to justify the expenditure of taxpayer funds. Similar tactics have been observed in narratives regarding other nations, including Iran, Russia, China, Cuba, and Venezuela. These displays often function as propaganda designed to manipulate public perception and maintain a state of constant alarm.
